EDUCATION

B.S. in Computer Science, University of California, Santa Cruz, June 2015

WORK EXPERIENCE

Software Engineer - Wheelhouse Enterprises   June 2015 - Present

- Developed a suite of internal administrative tools usig Python & Flask.
- Designed and developed responsive UI elements for new site (topadvisor.com)
- Assisted with updates & maintenance of legacy C# MVC codebase.
- Spearheaded move towards automated testing & notifications.

SDET Intern - SurveyMonkey   June 2014 - August 2014

- Developed automated tests using Python and Selenium Webdriver
- Built test libraries to enable future SDETs to more easily update existing tests & write new ones.
- used Jenkins to automate the running of tests on a scheduled basis

OTHER RELEVANT EXPERIENCE

Took CMPS 140 - Machine Learning at UCSC during my last quarter of senior year. As a final project, my team used linear regression to predict students' first quarter university grades based on high school performance. Received an A.

Co-led design of a new website for Classroom Hero, a friend's eduction-tech startup (https://itunes.apple.com/us/app/classroom-hero/id961950947?mt=8). Used Ruby on Rails with a PostgreSQL database. I learned the basics of the MVC paradigm and got valuable experience doing both back-end development, and customer-facing design using Bootstrap. The new website was eventually scrapped, as development resources were needed elsewhere.

OTHER SKILLS & EXPERIENCE

Varying levels of experience with Java, Javascript/HTML/CSS, C, C#, Haskell, Prolog, Python, and Groovy.
Years of experience with Linux (Ubuntu) from daily use.
Quick learner with enthusiasm for acquiring new skills.
Examplary written and verbal communication abilities.
